Modular Software Components

- **Software Components** are the building **blocks** of software systems.

- **Modular Software** is a software design technique that emphasizes **separating** the **functionality** of a program into independent, interchangeable **modules**.

↳ Use more technologies

- **Software Applications** are the **final product** of software development.
- **Software Development** is the process of **creating** software applications.

HISTORY OF DATA

19,000 BC

The Ishango bone holds the first evidence of data collection and storage.

1600s

John Graunt introduces the concept of data analysis in 1663.

1800s

Herman Hollerith designs a machine that helped complete the US census in 1890.

1900s

Fritz Pfleumer invents the magnetic tape which later inspired the invention of floppy disks and hard disk drives.

1990s

Sir Tim Berners-Lee invents the World Wide Web.

Applications

- Software based on **layers** of **abstraction** and **modularity** lets implement different **database strategies**.

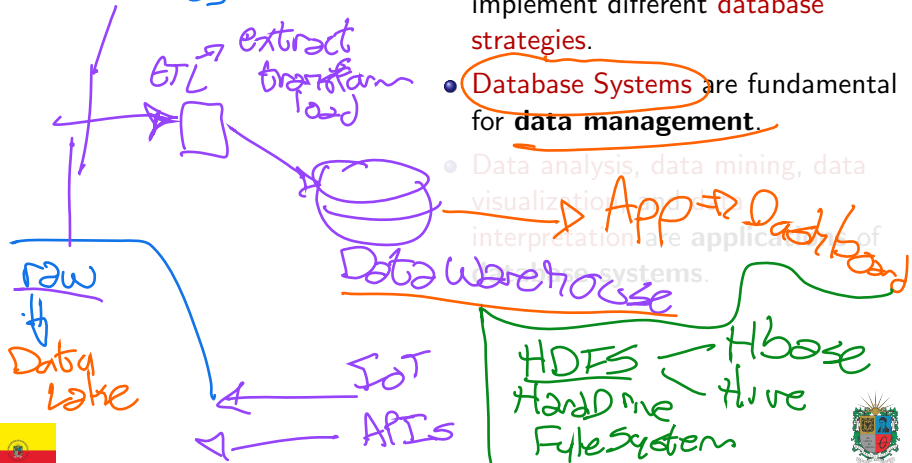

- Database Systems are fundamental for data management.

- Data analysis, data mining, data visualization, and data interpretation are applications of database systems.

Applications

• CSV • xls • pdf
Files

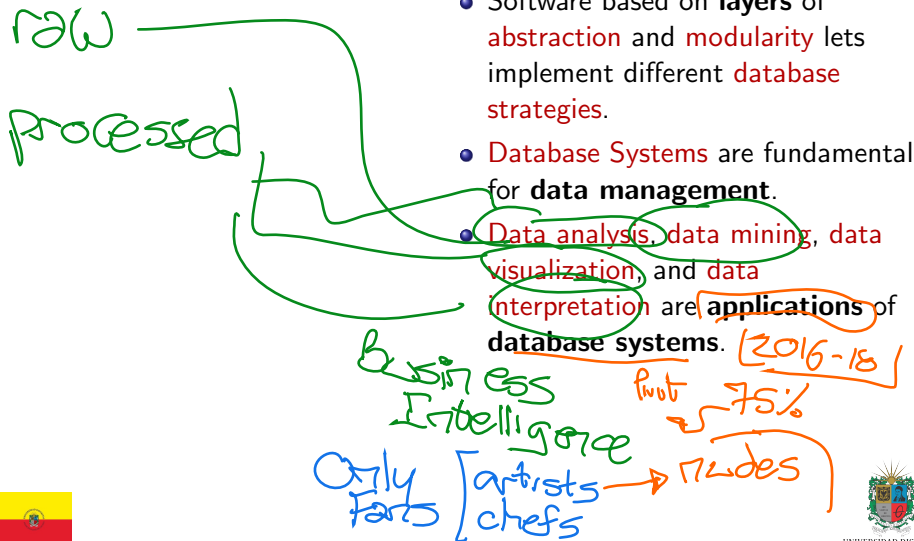

- Software based on **layers** of **abstraction** and **modularity** lets implement different **database strategies**.
- **Database Systems** are fundamental for **data management**.

• Data analysis, data mining, data visualization, and data interpretation are applications of database systems.

From Data to Information

- Data**: is a set of values of qualitative or quantitative variables.

- Data Management**: is the process of collecting, storing, processing, and analyzing data.

- Data Analysis**: is a process of inspecting, cleansing, transforming, and modeling data to discover useful information, informing conclusions, and supporting decision-making.

- **Data Analysis**: is a process of **inspecting**, **cleansing**, **transforming**, and **modeling** data with the goal of **discovering** useful **information**, informing **conclusions**, and supporting **decision-making**.

Business Intelligence

ETL

Tables, Columns and Rows

- **Table** is a collection of related data held in a structured format within a **database**.
- **Column** is a set of **data values** of a particular **simple type**, one for each row of the table.
- **Row** is a set of **data values** of a particular **relationship**, one for each column of the table.

Peter	43	Quiliga	Petonia

columns
data structure

Key-Value Data Structures

- Key-Value Data Structures are a type of **data structure** that can map **keys** to **values**.
- **Key** is a **unique** identifier for a **record** in a **data fragment**. **Value** is the **data** that is **associated** with the **key**.

Primary and Foreign Keys

- **Primary Key** is a **unique** identifier for a **record** in a **data set**.
- **Foreign Key** is a **column** or group of columns in a **table** that **links** to a **primary key** in another table.

→ give ⇒ searches

→ early table should has one PK

Examples: CC, cod, QR, NIT, dates, ..., retiro, fingerprint

PK is recommended to be an Integer

20 bits

	8 bytes	22 bytes
Juanito	1	Ing. S.S.
Juanita	2	Ing. Ch
pepto	3	Ing. S.S.
Repita	4	Ing. S.S.

FK

22 bytes

PK

cod	camera
1	Ing. S.S.
2	Ing. Ch
3	Ing. S.S.

CRUD Operations

Extract

- **CRUD** is an acronym for **Create**, **Read**, **Update**, and **Delete**.
- **Create** is the process of **adding** new **records** to a **data set**.
- **Read** is the process of **retrieving records** from a **data set**.
- **Update** is the process of **modifying records** in a **data set**.
- **Delete** is the process of **removing records** from a **data set**.

- ① new post \Rightarrow Create
- ② news feed \Rightarrow Read
- ③ edit dist \Rightarrow Update
- ④ remove posts \Rightarrow Delete

pk, value

FK

Name	<input type="text"/>
City	<input type="text"/>
Est.	<input type="text"/>
Genre	<input type="text"/>

DataBase Classification

- **DataBase** is a collection of **data** that is **organized** so that it can be **easily accessed, managed, and updated**.
- **Relational DataBase** is a type of **database** that stores and provides access to **data points** that are **related** to one another.
- **NoSQL DataBase** is a type of **database** that provides a mechanism for **storage and retrieval** of **data** that is **modeled** in **means** other than the **tabular relations** used in **relational databases**.

DataBase Classification

- **DataBase** is a collection of **data** that is **organized** so that it can be **easily accessed, managed, and updated**.
- **Relational DataBase** is a type of **database** that stores and provides access to **data points** that are **related** to one another.
- **NoSQL DataBase** is a type of **database** that provides a mechanism for storage and retrieval of **data** that is **modeled** in means other than the **tabular relations** used in relational databases.

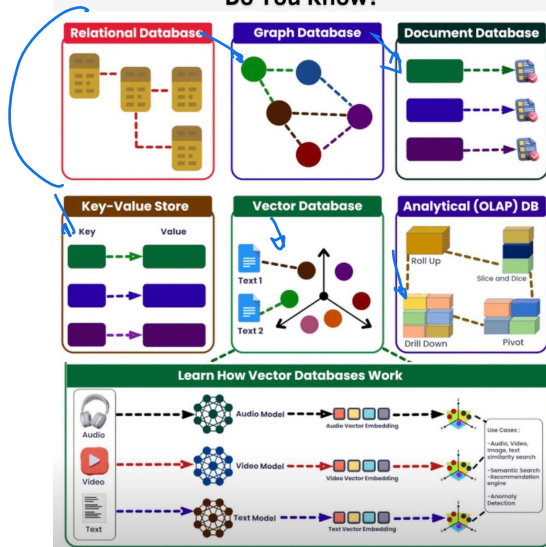

DataBase Classification

- **DataBase** is a collection of **data** that is **organized** so that it can be **easily accessed, managed, and updated**.
- **Relational DataBase** is a type of **database** that stores and provides access to **data points** that are **related** to one another.
- **NoSQL DataBase** is a type of **database** that provides a mechanism for **storage and retrieval** of **data** that is **modeled** in **means** other than the **tabular relations** used in **relational databases**.

Types of Database

How Many Types of Database Do You Know?

Outline

 - Study Case: Spotify

Entity-Relationship Model

Entity-Relationship Model is a data model for describing the data or information aspects of a business domain or its processes.

Entity Definition

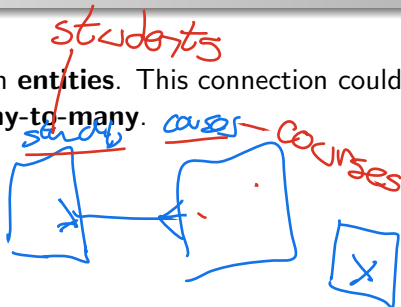

Entity is a thing or object in the **real world** that is **distinguishable** from other

entity \approx object
DB DAO

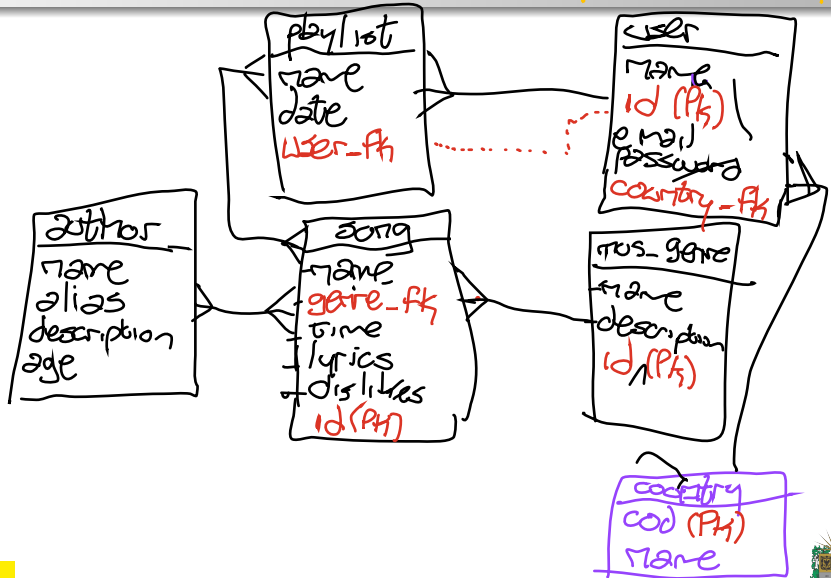

Relationship between Entities

Relationship is a **connection** between **entities**. This connection could be **one-to-one**, **one-to-many**, and **many-to-many**.

Creating our own **Espotifai**

1 char - 1 byte 1024 ⇒ 4 bytes
