

Databases Foundations I

Season 2024-I

Workshop No. 1 - Entity-Relationship Model

Eng. Carlos Andrés Sierra, M.Sc.
Computer Engineering
Universidad Distrital Francisco José de Caldas

Welcome to your first workshop on databases (at least in this course). Here I want to you imagine yourself working as a database designer, but one of the best ones. You have been learning a lot about databases, and *Alphabet* gives an eye on you. So, they asked you to complete a technical test to work as data engineer at any of its companies.

The test is pretty simple: you must to design a relational database to a very known product called **YouTube**. You must deal with requirements related to videos, channels, comments, like/dislike options, live transmissions, any additional functionality you know about the platform.

Alphabet asked you to deliver a document with some specifications described as follows:

1. Write the user stories you think could support your design
2. Write down the 10 steps methodology to get the Data Structure Entity-Relationship Model.
3. Write any technical decision/consideration you made in the design process
4. Write any concern or challenge you have completed the test.

Carlos Andrés Sierra, Computer Engineer, M.Sc. on Computer Engineering, Titular Professor at Universidad Distrital Francisco José de Caldas.

Any comment or concern related to this document could be send to Carlos A. Sierra at e-mail: *cavir-guezs@udistrital.edu.co*
